

ISO Fire Protection Ratings Explanation

The ISO classification in each fire district may be a split designation.

Any district with a split designation will have a designation for all properties within **5 road miles** of a fire station and within **1000 feet** of a water point. They will also have a designation for properties that do not meet these requirements. For Example: Troy Volunteer Fire Department has a 6/10 split rating where the 6 represents the properties within 5 road miles and the 10 represents properties beyond 5 road miles of a fire station.

ISO is currently reviewing all fire departments within Greenwood County. New designations should be completed by September of 2015.

Your local insurance company will have the latest information regarding your property designation rating. The insurance companies utilize satellite measuring programs to accurately determine distances to the nearest water hydrant. If you have any questions regarding your ISO classification, after discussing it with your insurance provider, please contact the Greenwood County Fire Coordinator at 864-942-8592.
